OFFICE OF THE GOVERNOR OF GUAM

FOR IMMEDIATE RELEASE - June 15, 2021

Guam Public Notice Website Now Available

Hagåtña, Guam - The Office of Technology (OTECH), in partnership with the Office of the Governor of Guam, is proud to announce the launch of the Guam Public Notice website, available at notices.guam.gov. This portal provides a platform for public information regarding news, events, press releases, notifications, alerts, and announcements from Government of Guam agencies and boards, pursuant to [Guam Public Law 32-037](#), and codified under [5 GCA §8107.1](#)

“One of the key goals of this administration is to ensure our government is operating as efficiently as possible, implementing technological improvements where we can to best serve our community. The launch of the Guam Public Notice Website is long overdue. Still, we are grateful to have this tool moving forward, especially as more government meetings are conducted over Zoom and other online platforms,” said Governor Lou Leon Guerrero.

Lt. Governor Josh Tenorio added, “We live in a digital era, and paired with the ongoing COVID-19 pandemic, we have adopted new ways of executing government operations and services. While we have relied on posting public notices via traditional media, we recognize that most news and information is primarily consumed online. We applaud OTECH for launching this site and for training all our agency public information officers and staff detailed to disseminating information to use this tool.”

“Not only does this site serve as a repository for all public notices, but it also allows residents to subscribe to receive updates and notices associated with their areas or agencies of interest,” added OTECH Chief Technology Officer Frank Lujan. “This platform will be an invaluable tool and will enhance our efforts as we shift more government services online.”

The Guam Public Notice Website law was passed in June 2013. To view the law in its entirety, click [HERE](#).
